Kakis.

1. Our Journey

1. Ground Truth & Learnings ⇒ Evolution of HMW

1. Kakis App!

NCSS discussions helped evolve HMW with additional perspective.

New Insights

- A very complex space, many stakeholders who are not looking for the same thing.
- Caregivers are a key stakeholder, often underappreciated.
- Sudden changes lead to need for respite caregivers. Current nascent solutions lack dynamic nature.
- **TRUST** needs be at the core

Evolution

Respite for Caregivers came out as an emerging need. **Trust** became central.

“HMW provide a genuine daily connection to elderly in Singapore”

“HMW enable caregivers to conveniently access trusted respite in a timely manner?”

Vanguard helped us validate the concept, developing into an operational plan.

Did you know?

- Vanguard runs a manual process to match caregivers / elderly with micro-jobbers in Pasir Ris.
- Matching take 3-4 weeks.
- 1 out of 5 request is unmet.
- 15k-30k monthly demand sized.
- **Likely large hidden demand can be unlocked.**

The need is not generic.

It is when

- a helper leaves,
- a spouse is hospitalised,
- or discharge happens without a plan.

Decision

To develop solution to match a **trusted** network of micro-jobbers with respite for caregiver in hyperlocal areas.

Then we worked on how to launch.

“Try all the workflow... in a very safe environment...”

VANGUARD'S SUGGESTION

01

Full Launch → Supervised Testing

Test resistance and usability before operational exposure.

02

Many services → Tier 1 Services

Chaperone, Companionship, Wellness Checks, Household Help etc.

03

Open supply → Whitelisting

Only already-trained kakis enter the supervised test.

04

Growth → Duty of care

A request we cannot fulfil properly is harm, growing what works matter more.

How Might We

enable caregivers to activate **trusted respite**
so that caregivers do not have to choose
between their **own responsibilities** and **care**
for their loved one?

Our Product - Singapore Kakis

CAREGIVER

Help in hours,
not 2–3 weeks.

Planned or urgent
A face senior already knows

AGENT OPS

Auto Match

ADMIN

Approves exceptions

KAKI

Paid, certified,
and asked back.

Vanguard training, tiered skills
Same seniors, week after week

Each pillar, made real in the app.

Activation layer

Urgent jumps the queue

Six named triggers,
matched in hours

WHY NCSS called the
market: 2–3 weeks to
confirm help

Care-planning wrapper

A living care plan & Sticky Matching

Meds, mobility,
language — every
kaki arrives briefed

WHY Field interviews:
families re-explain the
senior every time

Certified-supply orchestrator

Tiers unlock tasks with Human approval

Chaperone at Tier 1;
medicine admin
stays locked

WHY MOH & AIC bar
ratings — certification
carries quality

The demand is real — and mostly hiding.

1M

seniors aged 60+ in Singapore

~30% non-robust (~300K)

15–30K

est. respite bookings / month
nationwide

Vanguard's whiteboard extrapolation from Pasir Ris attach
rates

2–3 wks

lead time at incumbent providers

confirmed by NCSS calling Homage & Jagami themselves

>50%

of likely beneficiaries don't know
services exist

demand is latent, not observable — sizing from current
uptake is a floor

3–4 in 20

requests Vanguard already turns
away

supply-constrained — observed demand understates the
ceiling

<24 hrs

what a crisis actually allows

no current option fits inside it

Kakis.

The evidence walked us here.
Now try the care loop.

Caregiver → Kaki → Coordinator

A live system for planned and urgent respite, ready for a supervised tabletop with the people who must trust it.
